Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

C;Accession: $52715
R;Mertens, B.; Gaidulis, L.
Submitted to the EMBL Data Library, March 1995
A;Description: Cloning and sequence analysis of cDNAs encoding bovine CD40 ligan
A;Reference number: $52715
A;Reference number: $52715
A;Reference number: $52715
A;Residues: preliminary
A;Molecule type: mRNA
A;Residues: 1-185 <MER>
A;Cross-references: EMBL:248808; NID:g755701; PIDN:CAA88743.1; PID:g755702
C;Superfamily: tumor necrosis factor
C;Keywords: glycoprotein
F;33/Binding site: carbohydrate (Ser) (covalent) #status predicted
F;97-129/Disulfide bonds: #status predicted

SUBCELLULAR LOCATION: Type II membrane protein (Potential)
TISSUE SPECIFICITY: Widespread.
SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                        10;

Int. J. Dev. Biol. 45:853-859(2001).

-!- FUNCTION: Cytokine that binds to TNFRSF11B/OPG and to
TNFRSF11A/RANK. Osteoclast differentiation and activation factor.

Augments the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also play an important role in enhanced bone-resorption in humoral hypercalcemia of malignancy.

-!- SUBGUNIT: Homotrimer (By similarity).

                                                                                                                                                                                                                                                                                                                                         similarity).
TISSUE SPECIFICITY: Highly expressed in thymus and bone tissues.
PTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                         is not
